

PARKWAY'S HISTORY

The company began as Precision Products in 1986 with the owner in his home garage repairing precision tools. A few years later he got an offer to purchase ten used welding machines to improve and sell. Then the Gulf War hit and the need arose to expand his capabilities so, he decided to take on a couple of people to do part time machining and welding in a small shop with a few machines. The workload began to pick up and the owner retired from his current job and started working full time to be capable of expanding the services offered. His daughter began assisting with the added amount paperwork and went to college and proceeded to get a bachelors degree in Business Administration. Now she is management and taking the reins with his retirement. In 1993, the company was incorporated as Parkway Manufacturing Co, Inc. At this time the focus was on machining and some torch cutting and welding into light steel fabrication. As the years progressed, the growing popularity of heavy steel fabrication arose and we also became the United States producer of concrete mixers and liners for a West German company. This was a grand opportunity to take on and again the work force expanded. Parkway is now averaging employment for 15 people and moved into their own facility in Hampton, Virginia in 2005.

707 INDUSTRY DRIVE HAMPTON, VA 23661
